M15HP
OEM Board

SpO₂ – Pulse Rate – Waveform

**The Small OEM Board with
BIG Monitoring Performance**

Sensitivity

The M15HP is engineered to pick up signals that are as low as 0.1% perfusion.

Monitoring with DSP Technology

The M15HP Board uses digital signal processing technology for measuring oxygen saturation, and pulse rate. Signal filtering and complex noise analysis increases accuracy while decreasing measurement errors.

Serial Communication

The M15HP has a 5 pin connector containing a bi-directional TTL serial interface for communication, pulse beep, power, and ground. The serial output transmits status, oxygen saturation, pulse rate, plethysmographic waveform, two digitized spare analog channels, and control parameters.
